DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 25-28, 49 and 53 drawn to a liquid crystal device having a TFT, an interlayer, an organic leveling layer, and an opposing substrate classified in class 349, subclass 122.
 - II. Claims 5-8, 17-20, 29-32 and 41-44 drawn to a liquid crystal device having a TFT, an organic leveling layer, an opposing substrate and a channel region comprising a crystal silicon and the region exhibits a Raman spectro displacement from 522cm⁻¹ to the low frequency direction, classified in class 257, subclass 51.
 - III. Claims 9-16, 21-24, 33-40, 45-48, 50-52 and 54-56 drawn to a liquid crystal device having a TFT, an organic leveling layer and a level layer on an opposed substrate, classified in class 349, subclass 139The inventions are distinct, each from the other because of the following reasons:
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the Raman spectra shift is not require for invention I. The subcombination has separate utility such as a modulator.
3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the leveling layer of invention III is not required for invention I. The subcombination has separate utility such as modulator.

4. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the leveling layer on the opposed substrate is not required for invention II. The subcombination has separate utility such as modulator.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
